PVC-U residential doors

## ***PVC-U residential doors***

KBE residential door systems have long been the basis for doors and door systems featuring high quality technology and visual appeal. They present all the advantages that fastidious building owners have come to expect from a residential door. For that extra design, stability, safety, and thermal insulation KBE has developed a new residential door system for an installation depth of 70 mm.

- modern design with chamfered edges
- greater stability and torsion resistance through larger chambers and stronger steel
- welded corner connectors for torsional resistance
- 13 mm distance between axes for greater safety
- 4-chamber rebate seal technology with 70 mm installation depth for enhanced thermal insulation
- threshold with thermal break
- enhanced longevity
